## 13 DIMMING OPERATION

### ※ 3 in 1 dimming function (for B-Type)

- Output constant current level can be adjusted by applying one of the three methodologies between DIM+ and DIM-: 0 ~ 10VDC, or 10V PWM signal or resistance.
- Direct connecting to LEDs is suggested. It is not suitable to be used with additional drivers.
- Dimming source current from power supply: 100 $\mu$ A (typ.)

#### ◎ Applying additive 0 ~ 10VDC

#### ◎ Applying additive 10V PWM signal (frequency range 100Hz ~ 3KHz):

#### ◎ Applying additive resistance:

Note : 1. Min. dimming level is about 6% and the output current is not defined when 0% < I<sub>out</sub> < 6%.

2. The output current could drop down to 0% when dimming input is about 0k $\Omega$  or 0Vdc, or 10V PWM signal with 0% duty cycle.

I/P : 230VAC

O/P : DIMMING TEST

TA : 25 $^{\circ}$ C
