Note:

- A component power supply with load will be installed into final equipment which consists of an electronically shielded metal enclosure. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. The EMC tests mentioned above are performed using a well defined metal plate to simulate said metal enclosure. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies". (as available on <http://www.meanwell.com>)" and TDF (Technical Documentation File).
- Exception: The following end-devices do not need to fulfill EN61000-3-2
 - professional equipment with a total rated power greater than 1 kW;
 - symmetrically controlled heating elements with a rated power less than or equal to 200 W ;

This Declaration is effective from serial number SC2xxxxxxx
